ACHIEVEMENT

Smart India Hackathon (2019) - Final round qualifier

Lead Cloud Developer, App Designer for the team TechClans. Built Low-Cost Mobile Based **Irrigation Assistant app** using firebase cloud for the backend and designed the network deployment (using **LoRaWAN**) of the device to overcome range limitation.

SKILLS

LANGUAGES : C, C++, Go, Java, Python

CLOUD: AWS

DATABASE : MySQL, MongoDB

ML & DL FRAMEWORK : Scikit-learn, Keras

WEB TECH. : VueJs, Django, Spring & Spring boot

OPERATING SYSTEM: Linux

SE METHODOLOGY : Test Driven Development & Agile framework

VERSION CONTROL : Git, SVN

OTHER TECHNOLOGY : gRPC, Docker, GDB, PyUnit, Junit, Bash, CMake, Gradle, Hiberante, Wireshark, Redis, HTML, CSS.

Good grasp on **Algorithms & Data Structures** and have **good knowledge** of **Operating System, Computer Network, Computer Security, Natural Language processing, Micro services & Distributed System.**

Familiar with various **Design Patterns.**

Follow OWASP Secure Coding Guidelines while development and **Clean Code Practices** (Robert C. Martin) while coding.

VIKRAMADITYA SINGH

4Th YEAR STUDENT

PROFILE

I am an energetic, hardworking and motivated individual with expertise in **Algorithms, Data Structures, Application Development, Linux, Networking, Database** and have good knowledge of **Cyber-Security**. I am a good listener, imaginative, eager to learn, improve and highly adaptable. Reliability, ownership and excellent interpersonal skills are my core qualities.

EDUCATION

Bachelor of Technology in Computer Science Engineering – (2017- 2021)
Indian Institute of Information Technology, Guwahati (8.3 CGPA till now).

12th Science from CBSE Board – (2015 - 2016)

Modern Delhi Public School, Faridabad, Haryana

Physics(A1), Maths (A1), Chemistry(A2) and 87%(Overall)

10th from CBSE Board – (2013 - 2014)

Dynasty International School, Faridabad, Haryana

9.8 CGPA

WORK EXPERIENCE

CISCO (SDE Intern : May-July 2020)

Worked on Snort 2.9.16 & developed a gRPC detector and integrated it with the FMC console to enable generation of alerts and worked on the pre-processor framework for scanning the message content transferred via gRPC for malicious payloads.

PROJECTS

Domain Generating Algorithm Detection

A Domain Generating Algorithm (DGA) is a program or subroutine that provides malware with new domains on-demand or on the fly. Detected the algorithmically generated domain with an accuracy of 96% and classified the detected domains to its respective DGA variant by accuracy of 87% and was able to detect unknown DGA variants by using clustering.

Leave Management System

Built a complete leave management system using Flask and VueJs with features like email notification, visualising the leaves records etc. Created the SRS, ER, Data flow, Class, Sequence and Use case diagram. Followed the TDD approach and released it as a docker image.

COURSES AND WORKSHOP

- **Foundations of Data Science** from PadhAi
- **Deep Learning** from PadhAi
- **Machine Learning A to Z** from Udemy
- **Ultimate AWS certified solutions architect associate 2020** from Udemy
- **DevOps on AWS** from XDA-Developers
- **IOT Workshop** from Technomate Edubotics
